LIGHTING THE WAY IN QUALITY & SERVICE

PETROL STATION
LIGHTING SPECIALISTS

Attract customers from the road

Australian consumers are spoilt for choice when it comes to deciding where to stop for fuel and convenience items. As a result, it's crucial that fuel retailers provide a clean, safe and visually-striking service station to attract as many customers as possible.

Advanced Lighting Technologies are the petrol station lighting specialists – we've worked with some of Australia's largest fuel retailers to provide LED lighting solutions that dramatically reduce energy consumption and maintenance costs. Our experience in this area, combined with our carefully-selected product range and team of industry experts, means we're able to deliver a total lighting solution designed to exceed your expectations from planning to installation and beyond.

Whatever the application, whatever the budget – we'll have a solution that fits your needs.

Canopy lighting you can trust

With your target audience often driving past at speed, first impressions really do count for fuel retailers, and the canopy / forecourt area is often the first chance you have to make a genuine impression on potential customers. A bright, uniformly lit canopy can also reduce the risk of accidents and theft.

We offer a range of lighting solutions suitable for installation in single and double-skin canopies, soffits and other roof types, including the revolutionary **Cree CPY Series**. An industry leader, the Cree CPY250 LED luminaire now offers higher performance and greater value than ever before, backed by a 10-year manufacturer's warranty.

Increase security and reduce risk

Perimeter and security lighting not only help to keep your business safely lit, they also provide an opportunity to make a first impression and display your brand prominently. Well-lit parking spaces, walkways and other amenities can make customers feel safer and welcome when deciding where to stop.

We offer a wide range of external lighting options designed to provide better light while using less energy, including the **Cree XSPW Series**, which delivers incredible efficiency without sacrificing application performance.

Turn browsers into buyers

You should aim to make your retail setting as inviting as possible. A great lighting solution should create a comfortable, uniform environment that customers are happy to spend time in, but also allow them to quickly find the items they need. It's important to evenly highlight product displays and amenities such as ATMs and coffee facilities, avoiding shadowy spots and dark corners caused by inconsistent or unmaintained lighting.

A lighting solution featuring a high colour rendering index (CRI) score will display fresh fruit, foods, beverages and other items as they were intended to be seen – with bright, full and vibrant colours that seem too good to be true.

Our product range includes interior LED solutions like troffers, panels, downlights and track lighting systems, ideal for highlighting displays and everyday retail use.

Advanced Lighting Technologies are striving to revolutionise the lighting industry by delivering high-quality, sustainable LED lighting that is affordable and available to all. We're dedicated to developing new LED lighting solutions that improve our clients' infrastructure and reduce energy costs.
